

# BuildersAvenue

Next Generation Web-based estimation system that inter-operates with point of sales/inventory systems

“BuildersAvenue has automated Bison’s Estimation process tremendously and helped us win more business and improve our bottom line”

**Tom Tolleson**  
Sales Manager  
Bison Building Materials

BuildersAvenue is WEB-based building material quantity take-off software. Estimates can be generated with simple digitizing/digital tracing. With BuildersAvenue one can automatically specify SKUs and integrate with inventory management/point-of-sale systems/ERP systems to generate Purchase Orders/Pick Tickets. BuildersAvenue is built on .NET/Microsoft DNA architecture, which allows integration of heterogeneous data from a variety of databases to effectively and successfully solve Building Material suppliers’ and builder’s data management problem.

### Features/Benefits:

- Simple to use with windows look and feel
- Accepts variety of CAD and image formats to trace over to get quantities
- Integrated with traditional digitizers
- Generates automatic 3D models
- Tools to generate estimates for floor plans with options and complex roof lines
- Integrated document management
- Shorter and personalized estimation process.
- Ability to centralize the estimation process.
- Access to Customers Design/Buying patterns.
- Seamless integration with backend point of sales/inventory systems.
- Inventory Templates reduce operational losses from incorrect SKU specification.
- Integrated electronic PO and Purchase order/Schedule A automation
- Provide value added service to win large customer accounts
